Utilizing the Peregrine Platform to Your Advantage

The Peregrine is our high-performance BreadCrumb platform. Combined with Rajant's patented InstaMesh protocol, the Peregrine can integrate Kinetic Mesh wireless networks with other networks such as LTE/5G. The Peregrine is part of Rajant's initiative to develop deeply integrated solutions that securely combine data from connected people, vehicles, machines, and sensors, with machine learning. This data combination unlocks the benefits of process optimization, digital twins, predictive analytics, condition-based maintenance, augmented reality, and virtual reality while improving worker safety. The Peregrine is interoperable with all of our BreadCrumb models to expand market capabilities for industries like rail, shipping ports, military, mining, and heavy construction.

The Peregrine BreadCrumb is designed to perform flawlessly in various environments and integrate seamlessly with all Rajant BreadCrumb models to form a complete solution.

InstaMesh®

InstaMesh is the advanced, patented¹ protocol developed by Rajant that directs the continuous and instantaneous forwarding of packets from wireless and wired connections. It enables complete network mobility, high throughput, and low latency with very low maintenance and administrative requirements. Operating at Layer 2 and not requiring a root node or LAN Controller, InstaMesh provides robust fault tolerance even if there is a connection or node outage. No matter how you configure your network, InstaMesh networking software always determines the most efficient pathway between any two points, even when those points are in motion.
