

Fiber Patch Cables

They provide interconnect and cross-connect of applications over data centers, telecommunication networks, and enterprise environments

Fiber Patch Cables

Pre-terminated cables allow for the implementation of complete Plug & Play solutions to install even large cabling systems rapidly. The bend-insensitive fiber patch cable has less attenuation when bent or twisted compared with traditional fiber patch cable, making the installation and maintenance more efficient. Fiber patch cables provide interconnect and cross-connect of applications in entrance facilities, telecommunications rooms, data centers, at the desk and network applications to interconnect pre-terminated fiber cassettes in main distribution, horizontal distribution, and equipment distribution areas.
